#title Organization of the exons coding for Pro alpha-1(II) collagen
N-propeptide confirms a distinct evolutionary history of
this domain of the fibrillar collagen genes.

NAT. CENET. TO STATUTY: ATP + A PROTEIN TYROSINE - ADP + PROTEIN TYROSINE FORDED OF AN ALPHA CHAIN (50 KD) AND A BETA C. CATALYTY: ATP + A PROTEIN TYROSINE PROTEIN.

LICATALICALILAR FORMED OF AN ALPHA CHAIN (50 KD) AND A BETA CHAIN (145 KD) WHICH ARE DISULFIDE LINKED.

LISURGELLULAR LOCATION TYPE I MEMBRANE PROTEIN.

LISURAND CERSE DEFECTS IN MET ARE THE CANSE OF HEREDITARY PAPILLARY RENAL CARCINONA (HPRC). HPRC IS A FORM OF INHERITED KIDNEY CANCER CHARACTERIZED BY A PREDISPOSITION TO DEVELOP MULTIFLE, BILATERAL PRAIL THONS: THE PATTERN OF INHERITANCE IS CONSISTENT WITH AUTOSOMAL DOMINANT TRANSMISSION WITH REDUCED PENETRANCE.

LISURAL SELONGS TO THE MET TYROSINE KINASE FAMILY OF RECEPTOR.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The receptor is a dimer of disulfide-bonded 50K alpha and 145K beta chains that arise by cleavage of the precursor. Activity is regulated by phosphorylation of serine and tyrosine residues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Dean, M.; Park, M.; Le Beau, M.M.; Robins, T.S.; Diaz, M.O.; Rowley, J.D.; Blair, D.G.; Vande Woude, G.F.

COMPLEX Laminins are trimers of an alpha-type, a beta-type, and a
gamma-type laminin chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             #binding_site carbohydrate (Asn) (covalent) #status

##experimental_source F9 embryonal carcinoma cells
This protein is a cytoplasmic calcium binding protein which lacks
EF-hand motif, and is present in embryonal carcinoma cells. It
Plays important roles in regulation of cellular activities. This
protein is rich in hydrophilic amino acids.
                                                                                                                                                                                                                                                                                                        ö
